11 FEB 1982

MEMORANDUM FOR: Richard Lehman
Associate Chairman
National Intelligence Council

SUBJECT: Status of Interagency Intelligence Memorandum (IIM),
The Technology Acquisition Efforts of the Soviet
Intelligence Services ☐

25X1

We expect to meet the review and publication dates specified in our production schedule for the referenced IIM (see Attachment). We are holding to this schedule despite receiving several contributions up to two weeks beyond the established deadline. In addition to the IIM's principal contribution to US Government officials' understanding of the technology loss problem, its production is also intended to serve as a vehicle for bringing together all elements of the Intelligence Community -- collection, analytical, and counter-intelligence -- to better focus their attention on ways to stop the hemorrhage of advanced US technology to the USSR. This is a necessary albeit time-consuming process of self-education. Thus we consider our current production schedule realistic in its estimate of the time it will take to bring this IIM to publication. ☐
